Spot the Difference

Pre-Primary / Year 1 - Term 2, 2013

Changes are happening all around us. Chocolate melts in the sun, water evaporates from puddles and cement can harden in the open air. Predicting the changes that can happen to everyday materials is important in understanding the best way to manage things such as food handling, construction and packaging.

This term we will be looking at different types of materials in our world and exploring how they can change through the context of food including spaghetti, chocolate and popcorn. We will be learning how heating or cooling food can change its properties and whether these changes can be reversed or not.

We will also be introduced to the investigation process by investigating which type of chocolate melts the fastest.
